

◆ 4. Challenges in 5G Propagation (VERY IMPORTANT)

📌 Main Problems

◆ 1. Path Loss

👉 Signal becomes weak with distance

◆ 2. Fading

👉 Signal strength changes randomly

◆ 3. Interference

👉 Multiple signals overlap

◆ 4. Blockage

👉 Buildings block signal

◆ 5. Doppler Effect

👉 Movement changes frequency

◆ 6. Penetration Loss

👉 Signal cannot pass through walls easily

◆ 7. Multipath Effect

👉 Signal comes from many paths → confusion
